

Resources

In evaluating Hallen Environmental as a contractor, we are proud of our ability to self perform the execution of projects for our Clients. We believe the commitment to internal training, excellent management, supervision and positively reinforced quality control in our company provides the work environment necessary to retain and maintain the highest quality, quantity and skill sets for the workers employed.

This level of commitment to our employees has resulted in a very high retainage rate and longevity of service in both professional and union personnel. We feel this is important to our Clients to control the quality of services we provide to ultimately minimize costs and liability from the risks of subcontracting much of the work.

Hallen Environmental is in the enviable position of having both the quality and quantity of personnel and equipment as well as longstanding excellent union relationships in place to ensure we get the best supplemental labor as required to execute our projects. The following provides a summary of the extensive resources available to Hallen Environmental to work on your project:
